PLUG&PLAY

WOOD & NATURAL FIBER PLASTIC COMPOSITE SYSTEMS

Leave it to Cincinnati Milacron

– the global leader in WPC technology –

to make it that simple!

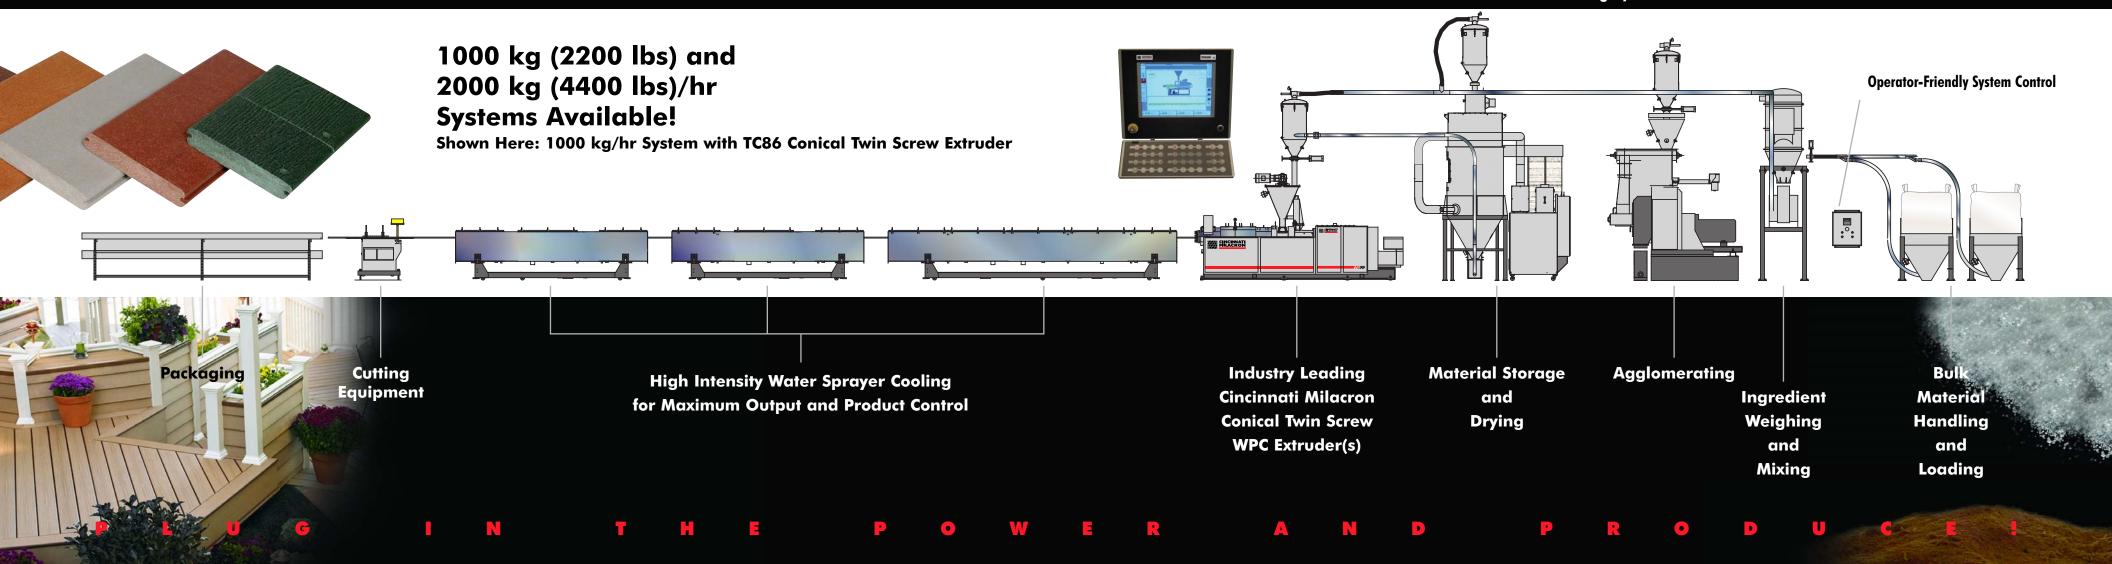

Take the mystery,
guesswork, cost
and complexity
out of WPC Extrusion
Equipment Systems.

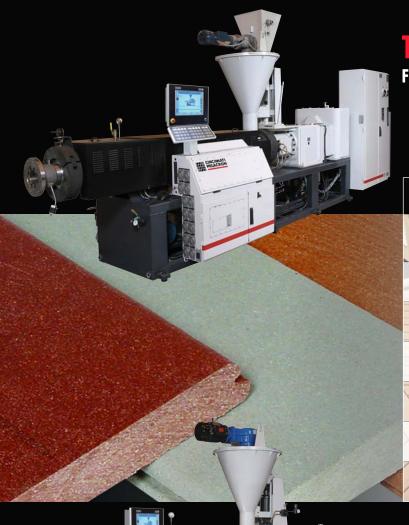

- Lower Equipment Lead Time
- Get into Production Faster
- Reduced Up-Front Capital Equipment Cost
- Proven Technology
- Complete Installation Available

- Over 300 extruders installed worldwide for WPC
- TC96, the largest conical twin screw extruder in the world with throughput rates up to 1182 kg/hr (2600+lbs/hr)
- In-house Shanghai, US and European labs for customer demonstrations and material formulation evaluation
- Only global company capable of supplying a totally tungsten-clad conical barrel for highly abrasive WPC formulations

TC96, the world's largest conical twin screw extruder. For throughput rates up to 1182 kg/hr (2600+lbs/hr).

TC86, Cincinnati Milacron's most popular conical twin screw extruder with maximum throughput range flexibility: 455-727 kg/hr (1000-1600 lbs/hr).

All specifications reflect average values based on typical machine layouts. Rates are subject to shape of the profile to be extruded and formulation, including plastic raw material (PE, PP, PVC, etc.), particle size of the plastic raw material (powder, flake, pellet, regrind), percentage of either plastic raw material and/or wood natural fiber, particle size of fiber and moisture content of fiber. Actual figures will vary depending on final machine configuration. If you require more specific ata, consult a Certified Installation Print for your particular machine. Performance specifications are based on theoretical data. Due to continual improvements, specifications are subject to change without notice.
